What is automatic lithium battery pack production line?

1. Introduction of Automatic Lithium Battery Pack Production Line An automatic lithium battery pack production line is a facility equipped with specialized machinery and automated processes designed to manufacture lithium-ion battery packs.

What is a battery pack?

A battery pack is a group of cells packaged into one unit, typically to achieve higher power and/or current loads. In most cases, batteries are first assembled into 'modules' with a fixed number of cells, and then the modules are assembled into packs.

What is a battery module automation production line?

Our battery module automation production line stands at the forefront of advanced manufacturing technology, designed to streamline and elevate the production of battery modules like never before.

What are the technical parameters of intelligent battery pack?

Intelligent battery pack finished product handling and packaging system. 3: Technical Parameters: Total production line length: 16 meters. Production capacity: Up to X battery packs per hour (customizable). Precision level: ± 0.1 mm positioning accuracy. Processing efficiency: 99.5% uptime.

What is a battery assembly line?

This assembly line is specifically tailored for the efficient, high-volume production of these battery packs, which are commonly used in various applications such as electric vehicles, portable electronics, and energy storage systems.

How many batteries can be placed at the same time?

Each station contains four sets of fixtures, and four batteries can be placed at the same time at a time. When station A is stacking, station B performs the moving work before extrusion synchronously, and the double stations alternately, so as to improve the efficiency of stacking and moving.
