What is a microinverter solar system?

Typically, microinverters are "distributed" inverters. Solar PV systems with microinverters have a small inverter installed for each individual solar panel. Instead of sending energy from every panel to a single inverter, microinverters convert the DC energy to AC energy on the roof itself.

Is Argentina a good solar market?

Argentina is arguably one of the most interesting solar markets at the moment. The South American nation's solar sector has grown by leaps and bounds over the last three years. By the end of 2020, it had an installed solar capacity of 759 Megawatts. This figure is shocking considering that Argentina's solar capacity stood at 8 Megawatts in 2017.

What happens if a solar system does not have an inverter?

Without the inverter, the power generated by the solar system is kind of useless. In simple words, the whole process is when solar panels capture sunlight and convert it into energy, which is sent to the inverter, which turns the DC energy into AC energy. After the energy conversion, solar electricity can power all the appliances and electronics.
