You'd still be able to parallel the battery connections to a common battery bank and have both Multis charge the batteries. Another approach would be to use separate chargers and inverters. For example two Phoenix chargers, one on each shore power inlet, a common battery bank then any number of Phoenix chargers to meet your load requirements ...

Battery Parallel Connection. If the battery bank is connected in parallel, the battery bank capacity increases but the battery voltage is the same as each cell. Only batteries with similar voltage ratings should be used for even charging. Otherwise it could damage the battery. If there are three 12V 200ah batteries, the bank voltage will be 12V.

I have 8 - 2 volt 362ah batteries for a solar bank. I would like to use all the batteries with a 12 volt charger/inverter. My question, can I connect 2 of the 8 in parallel and the remaining batteries in series? calculation: 8 batteries all equal in age and size - 2 volt 362 ah 2 in parallel = 2 volt 724 ah 6 in series = 12
