Why do we need a high energy density capacitor?

The resulting composite has a high energy density, and this fabrication strategy may be useful for developing better capacitors. --Marc S. Lavine Electrostatic dielectric capacitors with ultrahigh power densities are sought after for advanced electronic and electrical systems owing to their ultrafast charge-discharge capability.

What is a battery-type capacitor?

The introduction of battery-type materials into the positive electrode enhances the energy density of the system, but it comes with a tradeoff in the power density and cycle life of the device. Most of the energy in this system is provided by the battery materials, making it, strictly speaking, a battery-type capacitor. 4.
