

How ETH Zurich supports the energy transition in Switzerland?

With its Energy Science Center,ETH Zurich is supporting the energy transition in Switzerland with specific solutions in the areas of research,teaching and knowledge transfer. Already published:

How much electricity does Switzerland produce a year?

The Swiss net annual electricity production amounted to 63 TWh on average over the last ten years (SFOE,2019b). Thereof,57 % (36 TWh) stem from HP (net production after subtracting the consumption of pumps at water adductions),36 % (23 TWh) from nuclear and

What role does hydropower play in the Swiss electricity system?

Thanks to its flexibility and storage options at multiple scales,from milliseconds to seasons,hydropower is the backbone of the Swiss electricity system. Keeping its central role would foster the integration of volatile renewable energy resources like photovoltaics and wind.

What is Switzerland's energy balance?

Switzerland's energy balance provides information on domestic production, import / export, storage, conversion, own consumption, transport and grid losses and consumption of the various energy carriers in Switzerland on an annual basis. Anpassung der Heizwerte von Petrolkoks, Steinkohle und Braunkohle in der Gesamtenergiestatistik. Faktenblatt

How much energy did Swiss nuclear power plants import in 2016/17?

In the winter 2016/17,when the generation of the Swiss nuclear power plants was pronouncedly below average,the net import of 10 TWh represented even 39% of the domestic net generation in the winter half year (SFOE,2019b).

Does human-made storage capacity decrease in Switzerland?

The reduction of human-made storage capacity in Switzerland is not precisely known or monitored. Empirical lumped estimates indicate an annual rate of loss of storage volume of ? 0.2 to 0.5 % of the total storage capacity in Switzerland and worldwide,respectively (Schleiss et al.,2010; Schleiss et al.,2016; Boes,2011a; ZeK HYDRO,2020).

The study examines the need and role of energy storage in Switzerland for the years 2035 and 2050. It considers various types of storage -- electricity, heat, and gas/liquid storage -- and evaluates their use across different timescales ...

Switzerland's energy balance provides information on domestic production, import / export, storage, conversion, own consumption, transport and grid losses and consumption of the various energy carriers in

Switzerland on an annual basis. ... Estimation and overview of Switzerland's energy consumption. Schätzung des Energieverbrauchs der Schweiz ...

The technology was first applied in Zurich, Switzerland, in the early 1890s, when a local river was hydraulically connected with a nearby lake via a small pumped storage plant. ... Currently, pumped storage is the primary technology for energy storage services, balancing variable power production, serving as buffer and providing predefined ...

"Pumped-storage hydro-power is a mature technology," says Benoît Revaz of the Swiss Federal Office of Energy. More progress is needed however, he believes, to make the system more flexible ...

Energy storage innovation in Switzerland: a potential to compensate renewable energy fluctuations. For the first time, a pilot project called Alacaes is developing a new system that stores electricity in the form of ...

The EKZ Volketswil Battery Energy Storage System is an 18,000kW energy storage project located in Volketswil, Zurich, Switzerland. The electro-chemical battery energy storage project uses lithium-ion as its storage technology. The project was announced in 2017 and was commissioned in 2019.

SWEET (Swiss Energy research for the Energy Transition) focuses inter alia on research in developing and supporting renewable energy. The program periodically publishes research challenges or topics companies or universities can apply for. A committee selects the best proposal, which will then be funded by the Swiss Federal Office of Energy.

Battery energy storage PCS solution for EKZ, one of Switzerland's largest energy companies ABB, together with the Zurich power company EKZ, has successfully installed a 1 ...

This unique method enables fast charging and high energy storage and provides custom battery properties explicitly tailored to meet our customers' diverse needs. But it's not just about power - it's about the planet, too. Our innovative vacuum manufacturing process is completely solvent-free. ... Having worked together at EMPA and ETH Zurich ...

The Energy group at SusTec has become in recently years an important pillar of the group. With a special focus on energy modelling, the group has been involved in a plethora of Swiss and international projects of energy-related policy issues such as retrofitting buildings, enabling system flexibility, or implementation of green energy storage, among others.

Energy Vault is the creator of sustainable energy storage solutions designed to accelerate the transition to a carbon free, resilient power grid and transform the world's approach to utility-scale energy storage. ... Zurich, Switzerland . Founded 2020 . Raised from SOSV and 12 more See all investors. ... Agile Wind Power AG Local production ...

Switzerland's energy balance provides information on domestic production, import / export, storage, conversion, own consumption, transport and grid losses and consumption of the ...

ABB's innovative energy storage systems and traction converters to power trains in Germany ABB traction equipment to reduce rail operators' carbon emissions and provide reliable and efficient rail transport in Berlin and Schleswig-Holstein. ABB has won orders from Swiss-based rail vehicle manufacturer Stadler to enable energy efficient and

Researchers at ETH Zurich are using iron to store hydrogen safely and for long periods. In the future, this technology could be used for seasonal energy storage. ETH researchers Samuel Heiniger (left, with a jar of iron ore) ...

Switzerland is expanding rules for rooftop solar, energy storage, and energy communities to expand self-consumption and ease pressure on the grid. The new regulations, set to take effect in 2026 ...

With its Energy Science Center, ETH Zurich is supporting the energy transition in Switzerland with specific solutions in the areas of research, teaching and knowledge transfer. Already published: Electrifying industry with flexible heat pumps; Strengthening Swiss hydropower with science; ETH Zurich spin-offs develop high performance batteries

Battery cells are assembled into standardized battery modules in production. These are combined into energy storage systems and configured according to the specific application. The products utilize the latest lithium-ion technology and are characterized by their high energy and power density as well as their long service life even under high ...

ETH Zurich and EPFL want to work with partners from politics, science and industry to push innovative storage and transport solutions for renewable energy carriers. The overall goal is to create a climate-neutral and flexible energy system for Switzerland. Around 20 partners and industrial companies have already voiced their interest in a collaboration.

"With production scaling from 1.2 GWh to 7.6 GWh, SCB AG will serve both the Swiss domestic and international markets with sustainable battery storage from 2024," the company said.

If storage is not possible six 1 GW gas fired thermal power stations are necessary in order to cover the electricity demand in winter and would lead to a CO₂ emission of 40% of the present CO₂ emissions from the use of fossil ...

Technology, Dübendorf, Switzerland,3Christoph Nutzenadel AG, Zurich, Switzerland, 4Emeritus Empa & ETH Zurich, Universite de Fribourg, Bern, ... renewable energy, energy storage, cost of energy, power

plant units, CO₂ free ... (Figure 2, Figure 3) view of the energy production and storage requirements (Zützel et al., 2022). The electricity ...

In Switzerland, the energy policy includes a RET target of at least additional 5.4TWh by 2030 compared to 2000 (the production in 2010 was 66.3TWh; see Figure 1). One ...

Once completed in early 2018, this project will be the largest battery energy storage system in Switzerland*. It will be owned and operated by EKZ, one of Switzerland's largest ...

The announcement didn't reveal the MWh energy storage capacity of the expanded project. Prior to the expansion it was the joint-largest BESS in the country by megawatts along with a 20MW/20MWh system owned by independent power producer (IPP) Axpo.. EWS" BESS project has primarily been deployed to help transmission system operator ...

The largest number of jobs would be needed for setting up photovoltaic capacity. For the first and third strategies, they would be concentrated in the cantons of southern and south-western Switzerland; in the ...

Energy storage innovation in Switzerland: a potential to compensate renewable energy fluctuations. ... and Zurich are in partnership to try and improve the technology - by using metal alloys for example - which could be used especially in Northern Europe where there is a large production of wind power. ... which could be used especially in ...
