A flow battery is a rechargeable battery in which electrolyte flows through one or more electrochemical cells from one or more tanks. With a simple flow battery it is straightforward to increase the energy storage capacity by increasing the quantity of electrolyte stored in the tanks. The electrochemical cells can be electrically connected in ...

Flow batteries: Design and operation. A flow battery contains two substances that undergo electrochemical reactions in which electrons are transferred from one to the other. When the battery is being charged, the transfer of electrons forces the two substances into a state that's "less energetically favorable" as it stores extra energy.

For example, in the Vanadium Redox Flow Battery, a common type of flow battery, four different oxidation states of vanadium ions (V^{2+} , V^{3+} , VO^{2+} , and VO_2^{+}) are utilized in the redox reactions. During discharge, V^{2+} ions in the anode electrolyte are oxidized to V^{3+} , while VO_2^{+} ions in the cathode electrolyte are reduced to VO^{2+} . This ion ...
