### **Household Hybrid Inverter Project**

Are hybrid inverters a good choice for your solar project?

Hybrid inverters are a solid solution for those solar projects built for multi-purpose, more complex applications. If you desire to take advantage of free and clean solar energy, the cheaper rates of grid power during off-peak hours as well as the resilient power that battery supplies, hybrid inverters can let you do so with ease.

#### What is a hybrid inverter?

A hybrid inverter is essentially two inverters in one. It combines a solar inverter and a battery inverter into one simple unit. Hybrid inverters use solar energy to power your home, charge a battery, or send excess energy into the electricity grid. They also provide emergency backup power during a blackout.

#### What is a grid hybrid solar power inverter?

In grid-connected mode, the grid hybrid solar power inverter prioritizes solar power utilization. It effectively stores excess energy in the battery while allowing for grid import during periods of insufficient solar generation.

#### What happens to excess solar energy with a hybrid inverter?

Like regular string solar inverters, hybrid inverters convert solar DC power from strings of solar panels to AC (alternating current) power used to power your home. However, unlike solar inverters, excess solar energy is used to charge a connected battery system or exported to the electricity grid.

#### How does a hybrid solar inverter work?

The DC power produced passes through the inverter and converters into AC, which is then available for immediate consumption. If the solar production surpasses the consumption, instead of sending the excess to the grid, as with basic on-grid systems, a five star hybrid solar inverter redirects this surplus to charge the connected battery.

#### What is hybrid inverter with solar battery charging system?

However, due to low capacity of the battery the inverter dies out with the use of heavy load appliances. This project is designed in such a way that it overcomes this limitation by the use of solar energy. Hybrid Inverter with Solar Battery Charging System consists of an inverter powered by a 12V Battery.
