

# How much does an uninterruptible power supply cost in Norway

How much does a kilowatt-hour of electricity cost in Norway?

While one kilowatt-hour of electricity cost on average NOK 0.61 in February of 2021 (USD \$0.06), it had jumped to NOK 5.43 in August of 2022 (USD \$0.55). That's an almost tenfold increase. Yes, the cost of living is high in Norway, but electricity was always an exception. So, what is happening? Why are the prices so high?

Why are Norway's electricity prices so high?

Norway's trading capacity with other countries is high, and price levels in Norway are therefore strongly influenced by the cost of producing electricity in thermal power plants, and especially by the prices of coal, natural gas and emission allowances.

Does Norway have cheap electricity?

Norway has traditionally had very cheap electricity where you could use almost as much electricity as you wanted without fearing the bill. But that has all changed after Norway's electricity export lines skyrocketed the electricity prices back in 2021, and they are now far higher than ever before.

Why does Norway import electricity at night?

In thermal power systems, it is costly to regulate production, and there is wider variation in electricity prices during the course of a day. These differences mean that Norway can import electricity from abroad at night, when the price is lower, and export it during the day, when consumption and prices are higher.

How do cables affect electricity prices in Norway?

Exactly how this works is quite complex, but essentially, cables make export possible. This means that when the electricity price is higher in the UK or Germany than in Norway, electricity will flow towards those two countries via the new cables - which in turn will result in higher prices in Norway.

How does Norway's power supply system affect price variability?

Renewable production and consumption levels in countries connected to Norway's power supply system also have an influence. The large proportion of hydropower in the Norwegian and Swedish production mix means that variations in water inflow to hydro reservoirs have a strong effect on price variability in the Nordic region.

Uninterrupted Power Supplies (UPS) | When it comes to Uninterrupted Power Supplies, takealot has the best online UPS range, quality and prices.

The price of a UPS is based on 3 factors: power rating, battery capacity, and warranty. A small 230Watt 4.5Ah system is as low as \$37 and can go up exponentially.
