

It is necessary to buy outdoor power supply when going to Syria

Certainly, bad-faith actors whose hostile intent towards Israel is well-documented can exploit the power vacuum in Syria to acquire highly advanced and disruptive weapons, including WMD. We should not disregard outright intelligence suggesting such actors may exploit the fog of war created by the downfall of the Syrian regime to attack Israel.

Do not use the Power Supply in locations subject to excessive amount of dust or where liquids, foreign matter, or corrosive gases may enter the interior of the Product. Install the Power Supply well away from devices that produce strong, high-frequency noise and surge. Do not use the Power Supply in locations subject to direct sunlight.

And would the location also benefit from a supply of water or data cables? Equipping any outdoor space with a power infrastructure is going to add a great degree of flexibility to the location, but when designing the power supply, it is important to have a picture of the typical and maximum usage that will be required.

Check that the equipment is suitable for the electrical supply with which it is going to be used, and the electrical supply is safe. It is often beneficial to use a Residual Current Device (RCD) between the electrical supply and the equipment. Make sure that the user of the equipment is trained to use it safely and can keep others safe.

Make sure to check if any of your devices need a power surge on startup (or at any point) and if make a note so you can buy a power station that has the necessary power output to support this surge! Now that you have a basic understanding of power consumption concepts let's move on to calculating your camping trip's power requirements.
