How many times more energy can a super capacitor store?

A one farad super capacitor can store one million times more energy at a common voltage, than a 1uF capacitor, one billion times more than a 1nF capacitor, and one trillion times more than a 1pF capacitor. Cool, huh? However, super capacitors have very small voltage ratings, such as 2.5V, 2.7V and 5.5V (Some common values).

A large supercapacitor has high capacitance values, allowing it to store more electrical charge than typical capacitors. This increased ability to store energy results in faster charging and ...

A supercapacitor of a given weight cannot store nearly as much energy as a lithium-ion battery can. However, a supercapacitor can discharge far faster than a battery can. So while a supercapacitor (at present) cannot be used to power a car for hundreds of kilometres like a battery can, there are power application where a supercapacitor can serve.

This is particularly impressive when compared against current technology: a commercially available capacitor able to store 1 Farad of electrostatic energy at 100 volts would be about 220mm high and weigh about 2kgs, though current supercapacitor technology is about the same, in terms of dimensions relative to energy storage values, as a ...
