For PV modules: IEC 61215-2: Terrestrial photovoltaic (PV) modules - Design qualification and type approval -

Consider having a set of four solar panels: three panels of 12V and 3A and one panel of 9V and 1A. If you connect these four panels in parallel, all of them must have the same voltage, and therefore, will generate at the maximum possible voltage for one of the panels, which means 9V. Ptot = P1 + P2 + P3 + P4 = 9V \* (3A + 3A + 3A + 1A) = 90W.
