

Outdoor power supply price is too high

What happens if a power supply is too high?

When high power loads such as power supplies, frequency converters or on-board chargers are powered up, currents that can be many times the rated current occur for a short period. This can result in undesirable effects, such as the tripping of fuses, or even damage to the system.

Although a too-large power supply will have an extra margin of safety as far as not over-loading, a larger unit is often less efficient at lower loads (under 20% of its total capability) and therefore will waste more electricity than a more appropriately sized unit.

Why are the prices of high-capacity PSUs so high?

The higher demand for high-capacity PSUs, driven by the resurgence of crypto mining, is causing higher prices. Traditional sales of PSUs follow this chain: factory, brand headquarters, brand local office, distributor, reseller, consumer.
