Understanding how to match the power supply for LED linear lights is essential for successful outdoor linear lighting projects. By selecting an appropriate power supply, considering power ratings, and accounting for ...

Choosing the correct LED power supply: Our RGB LED strip light uses 12 volts and 2.2 watts per foot. So, if you want to install 13 feet of RGB color changing LED light strips you will need a power supply to handle 28.6 watts. Remember, watts divided by volts equals amps. So a simple computation will tell you which power supply you need.

4. Mount Power Supply in Bottom of Case. Before installing a power supply into your PC, remember to ground yourself before physically handling your power supply or the inside of your case by either wearing an ESD wrist strap (see the tools you need to build a PC) or by regularly touching a metal object.

With the fan facing downwards, slide in the power supply from the side opening of your H510 case. E. Secure the PSU. Press the PSU against the rear of the PC and screw it into the case using four 6-32 Hexagon screws that came with the PSU (also in the white box from the H510 case). Online Tech Chat
