A UPS uninterruptible power supply is a device with two main functions- It is an emergency power system that provides a backup energy source during utility power failures. Depending on the outage span, a UPS can keep a system running long enough till utilities or generators come online, or it can give sufficient time to shut down the system properly and avoid data loss.

Unlike a backup generator, it does not need to power up in order to start generating power. In other words, if you experience a power outage in your area, your machinery should not shut down if it is plugged into a UPS battery backup. Many models of uninterruptible power supply USP also provide surge protection.

The "Best" level of UPS technology, Online battery backup systems provide the highest quality of power protection by incorporating double-conversion technology, whereby power coming into the UPS is converted from AC to DC. ...
