So putting even the smallest (16v) panels together in series will take you past the 30v limit, triggering the over-voltage protection (which completely cuts off the solar input). The best I have done is 2x 100w panels that put out ~5.5A at about 18v -- I'm getting 150w to 170w of solar input, which is enough for most of what I do right now.
