The unit of capacitance is Farad (F) which is named after M. Faraday. Farad is the capacitance unit in respect of coulomb/volt. If we say a capacitor with 1 Farad, then it will create a 1-volt potential difference between its plates depending on the 1-coulomb charge. 1 Farad is a very large value capacitor to use as a general electronic component.

Supercapacitors don't all have the same farad capacitance; some have more than others. If you're looking for a supercapacitor, you need to consider what electrical item needs it and how much energy it must store. Our ...
